

Most of Our Injuries Follow a Simple State-to-Error Risk Pattern

(review pages 45–59 in the Unit #1 Introduction & Overview Workbook)

This state-to-error risk pattern is involved in over 95% of all accidental acute injuries.

"Rushing probably causes a lot of my errors."

How would you explain this pattern to your family, friends or work colleagues?

What real world examples would you use to help them to understand this concept better?
